Tween™ series

Polyoxyethylene derivatives of sorbitan esters

The Tween™ series of surfactants are polyoxyethylene derivatives of the Span™ series products. Tween surfactants are hydrophilic, generally soluble or dispersible in water, and soluble in varying degrees in organic liquids. They are used for oil-in-water (O/W) emulsification, dispersion or solubilization of oils, and wetting. Frequently, Tween surfactants are combined with similarly numbered Span surfactants to promote emulsion stability. These products are widely used in personal care, fiber finish, HI&I cleaning, crop protection, paints & coatings, adhesives and other industrial applications.

(1) Color and Form at 25°C determined visually.
An approximation of color intensity is indicated by comparison with Gardner standards as follows:

Colorless-light yellow	< 1-2 Gardner units
Yellow	2-7 Gardner units
Amber	7-10 Gardner units

(2) Viscosity: ASTM-D-445-53T method. Pour point: ASTM-D-97-47 method.
